**Nursing and Instructional Building**

Our highest profile project is the new, state-of-the art Nursing and Instructional Building. Infrastructure under the building is in place and foundations to support the building are nearing completion.

As you may have noticed with the recent arrival of the crane, steel erection is moving quickly and we are very excited to see the building beginning to take shape.

Schedule

During the early stages of this project, we unexpectedly encountered 9,000 cubic yards of granite under the existing McIver Building. Removing this rock has been a difficult and time-consuming process. As a result, we have shifted our project timeline by one semester and the building is now expected to be ready for occupancy by the spring of 2021. We know on a campus like ours, changes have a cascading effect on multiple departments and plans. Those of you directly impacted by this change will receive more detailed communications. We will make every effort to be as efficient and accommodating as possible as we proceed.
